DETAILED ACTION

1. This action is responsive to the application filed on 5/13/99.

This action is made Non-final.

2. Claims 1-18 are pending in the case. Claims 1, 7, and 13 are independent claims.

The Examiner understands that this invention is directed towards control of document region analysis by determining a number of regions, and predefined data types associated with such regions as selected on a selection interface.

Drawings

3. The drawings filed on 5/13/99 have been approved by the draftsman.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C.

122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

5. Claims 1-2, 4-8, 10-14, and 16-18 are rejected under 35 U.S.C. 102(e) as being anticipated by Mahoney et al, hereinafter Mahoney (Pat.# 5,999,664, 12/7/99, filed 11/14/97).

Regarding independent claim 1, Mahoney discloses a document analyzer for segmenting a document image into a set of layout objects—*number of regions*—and to determine a predefined document feature--*data type*-- (col. 5, lines 44-50, col.13, L.34-67, and col.24, lines 20-67, fig.9, 969).

Moreover, Mahoney teaches a selection user interface for identifying set of features for search and further processing (col.16, lines 47-col.17, line 67, fig.6, 9-10, 12-14).

Regarding claim 2, which depends on claim 1, Mahoney discloses toggle mechanisms for enabling a user to request desired features by selecting and deselecting operations (col.24, lines 50-67, fig.9, 969).

Claims 4-5 are directed towards a computer system for implementing the system found in claims 1-2 respectively, and therefore are similarly rejected.

Regarding claim 6, which depends on claim 1, Mahoney discloses default selection configuration—"none"-- for enabling a user to request desired features (col.24, lines 50-67, fig.9, 969).

Claims 7-8, and 10-12 are directed towards a computer system for implementing the system found in claims 1-2 respectively, and therefore are similarly rejected.

Claims 13-14, and 16-18 are directed towards a method for implementing the system found in claims 1-2, 1-2, and 6 respectively, and therefore are similarly rejected.

Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. Claims 3, 9, and 15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mahoney in view of Venable (Pat.# 5,995,996, 11/30/99, filed 1/30/97).

Regarding claim 3, which depends on claim 1, Mahoney discloses various interfaces for carrying out several tasks—inputting document, searching, genre modeling, and feature processing—based on user selection of tasks and the interface with which it is carried out (col.7, lines 57-col.8, line 67, fig.2). Mahoney fails to explicitly disclose: *a processing pipeline identifier*. Venable teaches the invoking of a document processing pipeline for processing a document (col.8, lines 46-67). However, it would have been obvious to a person of ordinary skill in the art at the time of the invention to have combined the teachings of Mahoney, and Venable, and have included this identifier to invoke the pipeline, because Venable teach above the providing a user with the ability to emulate a multi-processing pipeline in a single processing environment for document image processing (col. 3, lines 1-67).

Claim 9 is directed towards a computer system for implementing the system found in claim 3, and therefore is similarly rejected.

Claim 15 is directed towards a method for implementing the system found in claim 3, and therefore is similarly rejected.

Conclusion

I. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Taylor et al. (Pat. # 5,848,184), Tyan et al. (Pat. # 5,893,127), Venable (Pat. # 5,701,479, 5,557,795, and 5,396,616), and Rangarajan (Pat. # 5,822,454).
